

3.5.1

Suppose A , B , and C are sets.

Theorem. $A \cap (B \cup C) \subseteq (A \cap B) \cup C$

Proof. Let x be arbitrary and suppose $x \in A \cap (B \cup C)$. Thus $x \in A$ and $x \in B$ or $x \in C$. If $x \in C$ then $x \in (A \cap B) \cup C$. In the case where $x \in B$ it follows that $x \in A \cap B$ and therefore $x \in (A \cap B) \cup C$. Since x was arbitrary we can conclude that $A \cap (B \cup C) \subseteq (A \cap B) \cup C$. \square

3.5.2

Suppose A , B , and C are sets.

Theorem. $(A \cup B) \setminus C \subseteq A \cup (B \setminus C)$

Proof. Let x be arbitrary and suppose $x \in (A \cup B) \setminus C$. Thus $x \notin C$ and $x \in A$ or $x \in B$. If $x \in A$ then $x \in A \cup (B \setminus C)$. If $x \in B$ then it follows that $x \in B \setminus C$ and therefore $x \in A \cup (B \setminus C)$. Since x was arbitrary we can conclude $(A \cup B) \setminus C \subseteq A \cup (B \setminus C)$. \square

3.5.3

Suppose A and B are sets.

Theorem. $A \setminus (A \setminus B) = A \cap B$

Proof. Let x be arbitrary and suppose $x \in A \setminus (A \setminus B)$. Then

$$\begin{aligned} x \in A \setminus (A \setminus B) &\text{ iff } x \in A \wedge x \notin A \setminus B \\ &\text{ iff } x \in A \wedge \neg(x \in A \wedge x \notin B) \\ &\text{ iff } x \in A \wedge (x \notin A \vee x \in B) \\ &\text{ iff } (x \in A \wedge x \notin A) \vee (x \in A \wedge x \in B) \\ &\text{ iff } x \in A \wedge x \in B \\ &\text{ iff } x \in (A \cap B) \end{aligned}$$

\square

3.5.4

Theorem. If $A \cap C \subseteq B \cap C$ and $A \cup C \subseteq B \cup C$ then $A \subseteq B$.

Proof. Suppose $A \cap C \subseteq B \cap C$ and $A \cup C \subseteq B \cup C$. Let x be arbitrary and suppose $x \in A$. Thus $x \in A \cup C$ and it follows that $x \in B \cup C$. Now if $x \in B \cup C$ then either $x \in B$ or $x \in C$. If $x \in B$ then since x was arbitrary we can conclude $A \subseteq B$. In the case that $x \in C$, then $x \in A \cap C$ and it follows that $x \in B \cap C$. Therefore $x \in C$ and $x \in B$. Thus, if $x \in A$ then $x \in B$ and since x was arbitrary we can conclude $A \subseteq B$. \square

3.5.5

Suppose A and B are sets.

Theorem. If $A \Delta B \subseteq A$ then $B \subseteq A$.

Proof. Suppose $A \Delta B \subseteq A$. We will prove by contradiction. Let x be arbitrary and suppose $x \in B$ and $x \notin A$. Since $x \in B$ and $x \notin A$ then $x \in A \Delta B$. Since $A \Delta B \subseteq A$, then $x \in A$. But this contradicts $x \notin A$. Therefore, if $x \in B$ then $x \in A$ and since x was arbitrary we can conclude that $B \subseteq A$. \square

3.5.6

Suppose A , B , and C are sets.

Theorem. $A \cup C \subseteq B \cup C \iff A \setminus C \subseteq B \setminus C$.

Proof. (\rightarrow) Suppose A , B , and C are sets. Suppose $(A \cup C) \subseteq (B \cup C)$. Let x be arbitrary and suppose $x \in A \setminus C$, which means $x \in A$ and $x \notin C$. Since $x \in A$, then $x \in A \cup C$ and therefore $x \in B \cup C$. This means $x \in B$ or $x \in C$ and since $x \notin C$, it must be that $x \in B$. Now since $x \in B$ and $x \notin C$ then $x \in B \setminus C$. Therefore, if $x \in A \setminus C$ then $x \in B \setminus C$ and since x was arbitrary we can conclude if $A \cup C \subseteq B \cup C$ then $A \setminus C \subseteq B \setminus C$.

(\leftarrow) Now suppose $A \setminus C \subseteq B \setminus C$. Let x be arbitrary and suppose $x \in A \cup C$, which means $x \in A$ or $x \in C$. If $x \in C$ then $x \in B \cup C$ and since x was arbitrary then $A \cup C \subseteq B \cup C$. In the case that $x \in A$, since $A \setminus C \subseteq B \setminus C$ then $x \in B$. Therefore, $x \in B \cup C$ and since x was arbitrary then $A \cup C \subseteq B \cup C$. \square

3.5.7

Theorem. For any sets A and B , $\mathcal{P}(A) \cup \mathcal{P}(B) \subseteq \mathcal{P}(A \cup B)$

Proof. Let A and B be arbitrary sets. Let M be arbitrary and suppose $M \in \mathcal{P}(A) \cup \mathcal{P}(B)$. Thus $M \in \mathcal{P}(A)$ or $M \in \mathcal{P}(B)$, which means $M \subseteq A$ or $M \subseteq B$. In the case where $M \subseteq A$, let x be an arbitrary member of M and it follows that $x \in A$. Since $x \in A$ then $x \in A \cup B$ and because x was arbitrary we can conclude $M \subseteq A \cup B$ and therefore $M \in \mathcal{P}(A \cup B)$. In the case where $M \subseteq B$, let x be an arbitrary member of M and it follows that $x \in B$. Since $x \in B$ then $x \in A \cup B$ and because x was arbitrary we can conclude $M \subseteq A \cup B$ and therefore $M \in \mathcal{P}(A \cup B)$. \square

3.5.8

Theorem. For any sets A and B , if $\mathcal{P}(A) \cup \mathcal{P}(B) = \mathcal{P}(A \cup B)$ then either $A \subseteq B$ or $B \subseteq A$.

Proof. We will prove the contrapositive. Since we proved that $\mathcal{P}(A) \cup \mathcal{P}(B) \subseteq \mathcal{P}(A \cup B)$ in exercise 3.5.7, we must show that $\mathcal{P}(A \cup B) \not\subseteq \mathcal{P}(A) \cup \mathcal{P}(B)$ to prove our goal that $\mathcal{P}(A) \cup \mathcal{P}(B) \neq \mathcal{P}(A \cup B)$. Let A and B be arbitrary sets and suppose $A \not\subseteq B$ and $B \not\subseteq A$. This means there is an element $x \in A \setminus B$ and an element $y \in B \setminus A$. Since $x \in A$ and $y \in B$ then both x and y are in $A \cup B$ and therefore the set $\{x, y\}$ is in $\mathcal{P}(A \cup B)$ but not in $\mathcal{P}(A)$ or $\mathcal{P}(B)$. Thus $\mathcal{P}(A \cup B) \not\subseteq \mathcal{P}(A) \cup \mathcal{P}(B)$. \square

3.5.9

Theorem. Suppose x and y are real numbers and $x \neq 0$. Then $y + 1/x = 1 + y/x$ iff either $x = 1$ or $y = 1$.

Proof. (\rightarrow) Suppose that $y + 1/x = 1 + y/x$. Now if $y = 1$ then we have proven our goal. So now assume $y \neq 1$ and $y + 1/x = 1 + y/x$, then it follows that $x = 1$.

(\leftarrow) Now suppose $x = 1$ or $y = 1$. In the case that $x = 1$ we have

$$y + \frac{1}{x} = y + \frac{1}{1} = y + 1 = 1 + \frac{y}{1} = 1 + \frac{y}{x}$$

In the case that $y = 1$ we have

$$y + \frac{1}{x} = 1 + \frac{1}{x} = 1 + \frac{y}{x}$$

\square

3.5.10

Theorem. For every real number x , if $|x - 3| > 3$ then $x^2 > 6x$.

Proof. Suppose that x is an arbitrary real number and that $|x - 3| > 3$. Then either $x - 3 \geq 0$ or $x - 3 < 0$. In the case that $x - 3 \geq 0$, then $|x - 3| = x - 3$ and therefore $|x - 3| > 3 = x - 3 > 3$. Solving for x , we have $x > 6$ and then multiplying both sides by x we have $x^2 > 6x$. In the case that $x - 3 < 0$, then $|x - 3| = 3 - x$ and therefore $3 - x > 3$. Solving for x we have $x < 0$. Multiplying both sides of $x < 0$ by $6 - x$ we have $6x - x^2 < 0$ and therefore $x^2 > 6x$. \square

3.5.11

Theorem. For every real number x , $|2x - 6| > x$ iff $|x - 4| > 2$.

Proof. (\rightarrow) Let x be an arbitrary real number and suppose $|2x - 6| > x$. Our goal $|x - 4| > 2$ means that either $x - 4 > 2$ or $4 - x > 2$. Since $|2x - 6| > 2$ then either $2x - 6 > x$ or $6 - 2x > x$. If $2x - 6 > x$ then it follows that $x - 4 > 2$. Now if $6 - 2x > x$ then it follows that $4 - x > 2$.

(\leftarrow) Now suppose $|x - 4| > 2$. Our goal $|2x - 6| > x$ means that either $2x - 6 > x$ or $6 - 2x > x$. Since $|x - 4| > 2$ then either $x - 4 > 2$ or $4 - x > 2$. If $x - 4 > 2$ then it follows that $2x - 6 > x$. In the case that $4 - x > 2$ then it follows that $6 - 2x > x$. \square

3.5.12

Theorem. For all real numbers a and b , $|a| \leq b$ if and only if $-b \leq a \leq b$.

Proof. (\rightarrow) Suppose a and b are arbitrary real numbers and that $|a| \leq b$. There are two cases to consider: $a \geq 0$ and $a < 0$. If $a \geq 0$ then $|a| = a \leq b$. It follows that $-b \leq -a$ and since $a \geq 0$ then $-a \leq a$. Therefore, $-b \leq -a \leq a \leq b$ and $-b \leq a \leq b$. Now in the case that $a < 0$ then $|a| = -a \leq b$. It follows that $-b \leq a$ and since $a < 0$ then $-a > a$ or $a < -a$. Therefore $-b \leq a < -a \leq b$ and $-b \leq a \leq b$.

(\leftarrow) Now suppose $-b \leq a \leq b$ and therefore $a \leq b$. Now we must prove that $-a \leq b$ to complete the proof. If we subtract a from both sides of $-b \leq a$ and add b to both sides we have $-a \leq b$. \square

3.5.13

Theorem. For every integer x , $x^2 + x$ is even.

Proof. Let x be an arbitrary integer. There are two cases to consider: x is even or x is odd. If x is even then there exists an integer k such that $x = 2k$. Plugging in $2k$ for x in $x^2 + x$ we have $x^2 + x = (2k)^2 + 2k = 4k^2 + 2k = 2(2k^2 + k)$. Since $2k^2 + k$ is an integer then $x^2 + x$ is even. In the case that x is odd there is a j such that $x = 2j + 1$. Plugging in $2j + 1$ for x in $x^2 + x$ we have $x^2 + x = (2j+1)^2 + (2j+1) = (4j^2 + 4j + 1) + (2j + 1) = 4j^2 + 6j + 2 = 2(2j^2 + 3j + 1)$. Since $2j^2 + 3j + 1$ is an integer, $x^2 + x$ is even. \square

3.5.14

Theorem. For every integer x , the remainder when x^4 is divided by 8 is either 0 or 1.

Proof. Suppose x is an integer and there exists an integer k such that $8k = x^4$. Since x is an integer, x is either even or odd. If x is even then there exists an integer m such that $x = 2m$. Then $8k = (2m)^4 = 16m^4$ and $k = 2m^4$ r 0. In the case that x is odd, then there exists an integer m such that $x = 2m + 1$. Then $8k = (2m+1)^4 = 16x^4 + 32x^3 + 24x^2 + 8x + 1$ and $k = 2x^4 + 4x^3 + 3x^2 + x$ r 1. Therefore, when x^4 is divided by 8 the remainder is either 0 or 1. \square

3.5.15

Suppose \mathcal{F} and \mathcal{G} are nonempty families of sets.

Theorem. $\cup(\mathcal{F} \cup \mathcal{G}) = (\cup\mathcal{F}) \cup (\cup\mathcal{G})$

Proof. (\rightarrow) Suppose $x \in \cup(\mathcal{F} \cup \mathcal{G})$, which means there is a set in $\mathcal{F} \cup \mathcal{G}$ that contains x . Thus the set that contains x is in \mathcal{F} or \mathcal{G} . If the set that contains x is in \mathcal{F} then $x \in \cup\mathcal{F}$ and $x \in (\cup\mathcal{F}) \cup (\cup\mathcal{G})$. In the case that the set that contains x is in \mathcal{G} , then $x \in \cup\mathcal{G}$ and $x \in (\cup\mathcal{F}) \cup (\cup\mathcal{G})$.

(\leftarrow) Now suppose $x \in (\cup\mathcal{F}) \cup (\cup\mathcal{G})$, which means there is a set in \mathcal{F} that contains x or a set in \mathcal{G} that contains x . If there is a set in \mathcal{F} that contains x , and this same set is in $\mathcal{F} \cup \mathcal{G}$. Thus there is a set in $\mathcal{F} \cup \mathcal{G}$ that contains x . In the case that there is a set in \mathcal{G} that contains x , then this set is in $\mathcal{F} \cup \mathcal{G}$. Thus there is a set in $\mathcal{F} \cup \mathcal{G}$ that contains x . Therefore $x \in \cup(\mathcal{F} \cup \mathcal{G})$. □

Alternate proof?

Proof.

$$\begin{aligned} x \in \cup(\mathcal{F} \cup \mathcal{G}) &\text{ iff} \\ \exists M \in \mathcal{F} \cup \mathcal{G} (x \in M) &\text{ iff} \\ \exists M \in \mathcal{F} (x \in M) \vee \exists M \in \mathcal{G} (x \in M) &\text{ iff} \\ x \in \cup\mathcal{F} \vee x \in \cup\mathcal{G} &\text{ iff} \\ x \in (\cup\mathcal{F}) \cup (\cup\mathcal{G}) & \end{aligned}$$

□

3.5.16

Suppose \mathcal{F} is a nonempty family of sets and B is a set.

A

Theorem. $B \cup (\cup\mathcal{F}) \subseteq \cup(\mathcal{F} \cup \{B\})$

Proof. (\rightarrow) Suppose x is arbitrary and $x \in B \cup (\cup\mathcal{F})$. Then $x \in B$ or $x \in \cup\mathcal{F}$. If $x \in B$ then because $B \in \mathcal{F} \cup \{B\}$, it follows that $x \in \cup(\mathcal{F} \cup \{B\})$. In the case that $x \in \cup\mathcal{F}$, there is a set $M \in \mathcal{F}$ such that $x \in M$. Since $M \in \mathcal{F}$ then $M \in \mathcal{F} \cup \{B\}$ and therefore $x \in \cup(\mathcal{F} \cup \{B\})$.

(\leftarrow) Now suppose $x \in \cup(\mathcal{F} \cup \{B\})$. Then there is a set M such that $x \in M$ and $M \in (\mathcal{F} \cup \{B\})$, which means $M \in \mathcal{F}$ or $M \in \{B\}$. If $M \in \mathcal{F}$ then it follows that $x \in \cup\mathcal{F}$ and thus $x \in B \cup (\cup\mathcal{F})$. In the case that $M \in \{B\}$ then it follows that $x \in B$ and thus $x \in B \cup (\cup\mathcal{F})$. □

B

Theorem. $B \cup (\cap \mathcal{F}) = \cap_{A \in \mathcal{F}} (B \cup A)$

Proof. (\rightarrow) Let x be arbitrary and suppose $x \in B \cup (\cap \mathcal{F})$. Then $x \in B$ or $x \in \cap \mathcal{F}$. If $x \in B$, then $x \in B \cup A$ for any set A and thus $x \in \cap_{A \in \mathcal{F}} (B \cup A)$. In the case that $x \in \cap \mathcal{F}$, then x is in every set $A \in \mathcal{F}$ and so $x \in \cap_{A \in \mathcal{F}} A$. Therefore $x \in \cap_{A \in \mathcal{F}} (B \cup A)$. Since x was arbitrary then $B \cup (\cap \mathcal{F}) \subseteq \cap_{A \in \mathcal{F}} (B \cup A)$.

(\leftarrow) Now suppose $x \in \cap_{A \in \mathcal{F}} (B \cup A)$. Thus $x \in B$ or $x \in A$ for all $A \in \mathcal{F}$. If $x \in B$ then $x \in B \cup (\cap \mathcal{F})$. If $x \in A$ for all $A \in \mathcal{F}$ then $x \in \cap \mathcal{F}$ and therefore $x \in B \cup (\cap \mathcal{F})$. Since x was arbitrary then $\cap_{A \in \mathcal{F}} (B \cup A) \subseteq B \cup (\cap \mathcal{F})$. \square

C

Theorem. $B \cap (\cap \mathcal{F}) = \cap_{A \in \mathcal{F}} (B \cap A)$

Proof. (\rightarrow) Let x be arbitrary and suppose $x \in B \cap (\cap \mathcal{F})$, which means $x \in B$ and for all $A \in \mathcal{F}$, $x \in A$. Thus $x \in A \cap B$ and since $x \in A$ for all $A \in \mathcal{F}$, then $x \in \cap_{A \in \mathcal{F}} (A \cap B)$. Since x was arbitrary, we conclude $B \cap (\cap \mathcal{F}) \subseteq \cap_{A \in \mathcal{F}} (B \cap A)$.

(\leftarrow) Now suppose $x \in \cap_{A \in \mathcal{F}} (B \cap A)$, which means for all $A \in \mathcal{F}$, $x \in A \cap B$. Therefore $x \in B$ and for all $A \in \mathcal{F}$, $x \in A$ and thus $x \in \cap \mathcal{F}$. Since x was arbitrary we conclude $\cap_{A \in \mathcal{F}} (B \cap A) \subseteq B \cap (\cap \mathcal{F})$. \square

3.5.17

Theorem. Suppose \mathcal{F} , \mathcal{G} , and \mathcal{H} are nonempty families of sets and for every $A \in \mathcal{F}$ and every $B \in \mathcal{G}$, $A \cup B \in \mathcal{H}$, then $\cap \mathcal{H}$ is a subset of $(\cap \mathcal{F}) \cup (\cap \mathcal{G})$.

Proof. Suppose A and B are arbitrary sets, $A \in \mathcal{F}$, $B \in \mathcal{G}$, and $A \cup B \in \mathcal{H}$. Let x be arbitrary and suppose $x \in \cap \mathcal{H}$, which means x is in every set in \mathcal{H} . Since $A \cup B \in \mathcal{H}$, it follows that $x \in A$ or $x \in B$. If $x \in A$, then since A is an arbitrary set in \mathcal{F} , then $x \in \cap \mathcal{F}$. If $x \in B$, then since B is an arbitrary set in \mathcal{G} , then $x \in \cap \mathcal{G}$. Therefore, $x \in (\cap \mathcal{F}) \cup (\cap \mathcal{G})$ and since x was arbitrary we conclude that $\cap \mathcal{H} \subseteq (\cap \mathcal{F}) \cup (\cap \mathcal{G})$. \square

3.5.18

Theorem. Suppose A and B are sets. Then $\forall x (x \in A \Delta B \iff (x \in A \iff x \notin B))$

Proof. Let x be arbitrary and suppose $x \in A \Delta B$. Then

$$\begin{aligned}
x \in A \Delta B & \text{ iff } x \in (A \cup B) \setminus (A \cap B) \\
& \text{ iff } (x \in A \cup B) \wedge x \notin (A \cap B) \\
& \text{ iff } (x \in A \vee x \in B) \wedge (x \notin A \vee x \notin B) \\
& \text{ iff } (x \notin B \implies x \in A) \wedge (x \in A \implies x \notin B) \\
& \text{ iff } x \in A \iff x \notin B
\end{aligned}$$

□

3.5.19

Theorem. Suppose A , B , and C are sets. Then $A \Delta B$ and C are disjoint if and only if $A \cap C = B \cap C$.

Proof. (\rightarrow) We will prove by contradiction. Suppose $(A \Delta B) \cap C = \emptyset$. Recall that $x \in A \Delta B$ means that $x \in A \setminus B$ or $x \in B \setminus A$. Now suppose $A \cap C \neq B \cap C$, which means $A \cap C \not\subseteq B \cap C$ or $B \cap C \not\subseteq A \cap C$. If $A \cap C \not\subseteq B \cap C$ then there exists an x such that $x \in A \cap C$ and $x \notin B \cap C$. Thus $x \in C$ and $x \in A \setminus B$, which also means $x \in A \Delta B$. However this contradicts our assumption that $(A \Delta B) \cap C = \emptyset$. In the case that $B \cap C \not\subseteq A \cap C$, there exists an x such that $x \in B \cap C$ and $x \notin A \cap C$. Thus $x \in C$ and $x \in B \setminus A$, which also means $x \in A \Delta B$. However this contradicts our assumption that $(A \Delta B) \cap C = \emptyset$.

(\leftarrow) We will prove by contradiction. Suppose $A \cap C = B \cap C$. Now suppose that $(A \Delta B) \cap C \neq \emptyset$, which means there exists an x such that $x \in (A \setminus B) \cap C$ or $x \in (B \setminus A) \cap C$. If $x \in (A \setminus B) \cap C$, then $x \in A \setminus B$, which means $x \in A$ and $x \notin B$. Since $x \in A$ and $x \in C$, then $x \in A \cap C$. It follows that $x \in B \cap C$ because $A \cap C = B \cap C$, however this contradicts our assumption that $x \notin B$. In the case that $x \in (B \setminus A) \cap C$, $x \in B \setminus A$. Thus $x \in B$ and $x \notin A$. Since $x \in B$ and $x \in C$, then $x \in B \cap C$. It follows that $x \in A \cap C$ because $A \cap C = B \cap C$. However, this contradicts our assumption that $x \notin A$. □

3.5.20

Theorem. Suppose A , B , and C are sets. Then $A \Delta B \subseteq C$ if and only if $A \cup C = B \cup C$.

Proof. (\rightarrow) Suppose $A \Delta B \subseteq C$. Let x be arbitrary and suppose $x \in A \cup C$. Thus $x \in A$ or $x \in C$. If $x \in C$ then $x \in B \cup C$. In the case that $x \in A$ then $x \notin C$ and it follows that $x \notin A \Delta B$ and thus $x \in A \cap B$. Since $x \in A \cap B$, $x \in B$ and thus $x \in B \cup C$. Now to prove the other direction suppose $x \in B \cup C$. Thus $x \in B$ or $x \in C$. If $x \in C$ then $x \in B \cup C$. In the case that $x \in B$ then $x \notin C$ and it follows that $x \notin A \Delta B$ and thus $x \in A \cap B$. Since $x \in A \cap B$, $x \in A$ and thus $x \in A \cup C$.

(\leftarrow) Now suppose $A \cup C = B \cup C$ and $x \in A \Delta B$. By the definition of symmetrical difference, $x \in A \setminus B$ or $x \in B \setminus A$. If $x \in A \setminus B$ then $x \in A$ and $x \notin B$. It follows that $x \in A \cup C$ and therefore $x \in B \cup C$. Since $x \in B \cup C$ and $x \notin B$, then $x \in C$. In the case that $x \in B \setminus A$, $x \in B$ and $x \notin A$. It follows that $x \in B \cup C$ and therefore $x \in A \cup C$. Since $x \in A \cup C$ and $x \notin A$, then $x \in C$. \square
