

## Errata

Below are possible mistakes I have identified in the book How to Prove It (2nd edition), by Daniel J. Velleman.

p 193 - line 12 - the word "get" should be "set"

p 253 - exercise 13 (d) - I think  $\forall b \in B(g(b) \in h(b))$  should be  $\forall b \in B(g(b) \in h^{-1}(b))$  because  $h$  is a function from  $A/R$  to  $B$  and therefore  $b$  is not in the domain of  $h$  but  $b$  is in the domain of  $h^{-1}$ . I also was not able to complete the exercise unless the  $h$  was changed to  $h^{-1}$ .
